

EXAMEN OFICIAL REALIZADO EN ESPAÑA EN LA CONVOCATORIA PCE UNEDASISS 2023

La prueba consta de dos partes:

a) **PRIMERA PARTE**: Bloque de 8 preguntas objetivas con un val« total de 4 puntos. Cada acierto suma 0,5 puntos, cada error resta 0,15 puntos y las preguntas en blanco no computan. Para contestar a este bloque debe utilizarse la hoja de respuestas Tipo Test. Es MUY IMPORTANTE leer las Instrucciones sobre cómo deben marcarse las respuestas. Las respuestas marcadas incorrectamente no se tendrán en cuenta. Solo hay una respuesta correcta – a), b) o c) – para cada pregunta.

En la Parte I A) debe elegir y contestar a 2 de las 3 preguntas sobre el texto. Si contesta a las 3 preguntas, solo se computarán las 2 primeras. En la Parte I B) debe elegir y contestar a 6 de las 8 preguntas sobre uso del inglés. Si contesta a más de 6 preguntas, solo se computarán las 6 primeras.

b) **SEGUNDA PARTE**: Bloque de redacción con valor total de 6 puntos. Debe escribir una redacción sobre uno de los dos temas propuestos

Part I

To most of the world they are just amusing pictures of an adorable cartoon bunny sitting beside, or sometimes inexplicably amidst, a bowl of rice. But in China, where these images have been circulating on social media, they carry a deeper, and more serious meaning. "Rice bunny", as this collection of images and emojis are known, emerged in 2018 as part of the global #MeToo movement among women to expose sexual harassment. In China, where state censorship saw hashtags related the campaign being blocked, internet users had to find an alternative to coordinate the movement in their country. As an image it looks innocuous enough, but when the words for the two seemingly unrelated subjects are said aloud, the true meaning becomes clear —they are pronounced "mi tu". Through the use of this translinguistic homophone, women in China were able for a time to share their stories and spread the word about the #MeToo movement within a country that can be highly suspicious of organised social movements.

On the surface, internet memes are a ubiquitous source o light entertainment -a way for people to express themselves through cleverly remixed templates of text, images and videos. They are arguably the wallpaper of our social media feeds and often provide us with a few minutes of idle, amusing fodder for procrastination during our day. But memes also have a serious side, according to researchers looking at modem forms of communication. They are a language in themselves, with a

capacity to transcend cultures and construct collective identities between people. These sharable visual jokes can also be powerful tools for self-expression, connection, social influence and even political subversion. Internet memes "are one of the clearest manifestations of the fact there is such a thing as digital culture", says Paolo Gerbaudo, a reader in digital politics and director of the Centre for Digital Culture at Kings College London. Gerbaudo describes memes as a "sort of a readymade language with many kinds of stereotypes, symbols, situations. A palette that people can use, much like emojis, in a way, to convey a certain content".

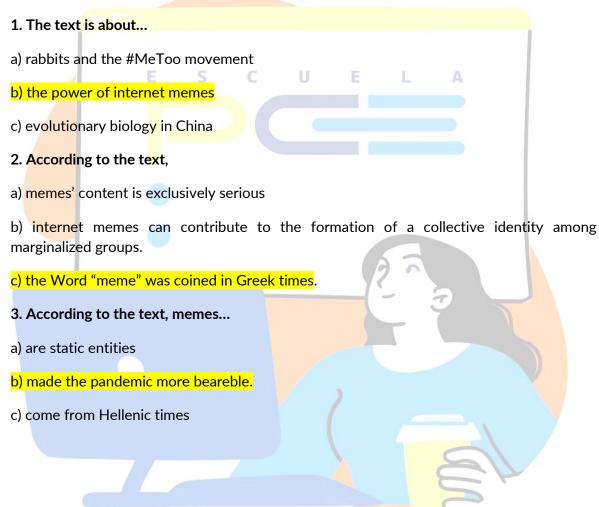

According to social media site Instagram, at least one million posts mentioning "meme" were shared everyday in 2020. But what is it that makes the internet meme so popular and why is it such an effective way of conveying ideas? Of course, memes have been around long before the rise and reproduction of familiar internet memes like the Distracted Boyfriend or the many wise faces of "Doge". Richard Dawkins, the evolutionary biologist, coined the term "meme" in his 1976 book The Selfish Gene, likening discrete bits of human culture that propagate between people to genes. Dawkins shortened the ancient Greek Word "mimeme"— with an apology to his classicist colleagues – to meme, to rhyme with "cream". He suggested that memes were melodies, ideas, catchphrases or bits of information that leap from brain to brain through imitation, expediting their transmission. He coined the term to highlight just jow human culture can replicate itself. And in that sense memes have been around probably since humans have had cultures they have shared. But we can also see the kernels of what makes modern internet memes so successful in ancient forms of popular culture. "We see the replication of mundane reality in many forms of art," says Idil Galip, a doctoral researcher at the University of Edinburgh, and founder of the Meme Studies Research Network. "Even going back to, let's say, Hellenic times, you've got something like tragic theatre, that takes things that happen to you that are upsetting and real-life and makes them into comedic things, which is what memes do."

With the arrival of the internet, however, memes have become a more tangible phenomenon that can be observed as they grow, spread and mutate. Researchers at Facebook showed in a study in 2014 just how widely memes posted on the social media site can spread and evolve. In one example, they found 121,605 different variants of one particular meme posted across 1.14 million status updates. Shifman's definition of memes, now widely used in the field, describes them as "a group of texts with shared characteristics, with a shared core of content, form, and stance". Broadly, "content" refers to ideas and ideologies, while "form" to our sensory experiences such as audio or visual, and "stance" to the tone or style, structures for participation, and communicative functions of the meme.

Fundamentally, no meme is an island. "A text that just spreads well , and a lot of people see it, is not a meme," says Shifman. "It's viral. But if a lot of people create

their own versions then it becomes a group of texts and then it's a meme." But for an idea to become a meme, it needs to be shared. Most successful internet memes — in that they spread wide and far — share a few key atributes. Many of us gained a new appreciation for memes as a welcome source of light during the pandemic relief. Research conducted during the 2020 lockdown in Spain by Lucia- Pilar Cancelas-Ouviña, a professor of didactics of language and literature at the University of Cádiz, found humour was a core feature of memes shared using the messaging application WhatsApp. Cancelas- Ouviña suggests it helped take the sting out of the fear and uncertainty was widespread at the height of the Covid-19 pandemic, a finding supported by other studies elsewhere.

B) Use of English. Choose the correct answer. You must choose and answer only 6 out of the 8 questions below (0,5 points each)

- 4. Don't worry about the exam. Just _____ your best.
- a) get
- b) make

<mark>c) do</mark>

5. He doesn't enjoy his German classes. He is not keen _____ languages.

a) on
b) in
c) for ESCUELA
6. Which word means the same as however?
a) aslo
b) moreover
c) nevertheless
7. I was really pleased when I heard she the exam
a) pass
b) had passed
c) passes
8. Charles had a car accident he too fast?
a) Is/driving
b) Has/driven
c) Had/been driving
9. We've bought a new radio for Mike but it is not very good. We'll have to look
one
a) another

b) the second

c) any

for

10. My older sister, who has four children _____, is a musician

a) of own

<mark>b) of her own</mark>

c) of her

11. Javier is a _____ boy, always with a smile on his fase

a) sympathetic

b) shy

c) cheerful

<u>Part II</u>

Write an essay of 150 – 180 word on one of the following subjects (6 points):

1. Technology is making communication easier in today's world, but at the expense of personal contact. To what extent do you agree? Provide ideas from your own experience of life.

While it's indisputable that modern technology has dramatically simplified communication, it's increasingly becoming a double-edged sword, diminishing personal contact. The pervasive use of social media, email, and messaging apps allows us to connect with people across the globe instantly, a convenience undreamt of just a few decades ago. However, this ease of interaction often comes at the cost of depth and intimacy in our relationships.

I've personally witnessed this effect in my own life. Frequent but fleeting online interactions often replace deep, face-to-face conversations. We increasingly trade the nuances of voice inflection and body language for emojis and shorthand, which, though efficient, lack the richness of physical communication.

Additionally, the omnipresent digital world tends to blur the lines between personal and professional life, increasing stress levels and leaving less time for personal connections.

In conclusion, technology has undeniably made communication easier, but we must be mindful of its potential to encroach upon personal contact. It is up to us to find a balance between using technology to stay connected and preserving the depth and authenticity of our personal relationships.

2. Have you ever fallen in love? Do you believe in romantic love? Provide as many details as posible.

Nowadays, people tend to think that love and romantic relationships do not work. Our society is changing and the ideals of love, marriage and so on are changing too. But, in this essay, I would give the reasons of why I still believe in Disney film relationships.

Firstly, I still remember when I first fell in love. It was a warm summer evening, and I found myself inexplicably drawn to a person who exuded warmth and charm. We talked, laughed and, then, we fell in love (and we still are!).

Furthermore, romantic love, in my opinion, is a tapestry of emotions intricately woven together. This kind of passion fosters growth, compassion, and empathy, allowing us to evolve both individually and as a couple. It is through love that we can discover our true selves and experience profound happiness.

In conclusion, falling in love is a transformative journey that brings joy and connections. My personal experience has solidified my belief in the transformative power of romantic love, as it has enriched my life and brought me immeasurable happiness.
